

Balloon Drop Project Write-Up → due Monday, September 9

Your individual lab write-up for the balloon drop project should address the following questions, but please don't just answer them in order. Synthesize the entirety of your project in your response. Limited to ONE page overall. Please submit either via Google Docs (with your name as the first line of the document) or print out a hard copy for me by class on September 9.

- How did your project perform compared to your expectations and why do you think its performance did (or did not) differ from your expectations?
- Discuss the design you started with, any changes you made along the way and reasons for those changes, and your final design. Explain your choice of design and materials and why these may have changed as the project progressed.
- How did your group work (what were the group dynamics like – was someone bossy, lazy, over enthusiastic, etc.?)
- Do you think you personally did your full share, too little or too much? Do you think your partner(s) did their full share, too little or too much? Address each person with a specific reference to what they did or did not do.
- Finally, what did you learn and how did you learn it? Please give this some thought and explanation.
